

Strong growth 2010 confirmed

Audited consolidated turnover: +30% up to €41 million

EBITDA: over €4 million

Net income (Group share): over €0,75 million

The EUROPLASMA Group achieved a strong business performance in 2010 with an increase in turnover by more than 30% to reach €41 million compared with €31 million in 2009 together with a net profit (Group share) over €0.75 million against a loss of (€3.641) million in 2009.

The Energy production from waste and biomass activity generated its first revenues.

The start of the construction of CHO Morcenx plant, last December, allowed the Group:

- to issue the first invoices relating to the EPC (Engineering, Procurement & Construction) contract of more than €25m attributed to the Group,
- to invoice the development fees of this project including some equipments.

However, the major part of the revenues on this project will be recorded in 2011.

The air and gas cleaning solutions activity took advantage of a contract worth over €10 million won by the sub-group Europe Environnement with its customer Air Liquide. The purpose of this contract is the supply of the abatement system of the gas coming from the solar cells and PV panels plant in Catania (Italy), today at the end of the erection phase. This unit represents a new reference for the Group's gas treatment capabilities. The major part of the revenues on this contract will also be registered in 2011.

The historical business remains well positioned despite the economical crisis effects which involved a diminution of the market actors of which the Group intends to take advantage.

The hazardous waste treatment activity benefited from the full impact of the actions launched in 2009 to expand margins and generated a profit despite a slight turnover decrease.

The 2010 earnings will be detailed in the next press release to be issued 28 April 2011, after the annual financial statements are closed by the Board of Directors.

About Europlasma

Europlasma is a French Group operating in the clean technologies and renewable energy production industries. Founded in 1992 to apply its proprietary plasma torch technology to hazardous waste destruction, it is now built on the following three business units:

- > **Inertam** is the global specialist in the destruction and recycling of asbestos and hazardous waste.
- > **Europe Environnement** is the European leader in industrial ventilation and gas cleaning systems.
- > **CHO Power** is a producer of electricity from waste and biomass gasification.
